# IPRARITE RESPULES

## IPRATROPIUM RESPIRATOR SOLUTION

### Composition :-

Iprarite Respules

Each 2ml respule contains:

Ipratropium Bromide BP equivalent to Ipratropium Bromide (anhydrous.....500 mcg)

### Dosage Form :-

Solution and Respules for nebulization

### Dosage And Administration:-

The respules/respirator solution are intended only for inhalation with suitable nebulizing devices and should not be taken orally or administered parenterally.

### Adults (Including the Elderly) and children Over 12 years of Age:-

250-500 mcg, three to four times daily.

### For the treatment of the Acute Bronchospasm:-

500mcg Repeated doses can be administered until the patient is stable. Daily doses exceeding 2 mg in adults and children over 12 years of age should only be given under medical supervision.

### Children (6 to 12 Years of Age):

For the treatment of the Acute asthma only.

125-250 mcg. up to total daily dose of 1 mg.

Ipratropium bromide should be administered no more frequently than 6 hourly in children less than 5 years of age.

For acute bronchospasm, repeated doses may be administered until the patient is stable. Where co-administration is required, Iprarite Respules may be combined with a short-acting, beta2 agonist in the same nebulizer chamber. The solution should be used as soon as possible after mixing and any unused solution should be discarded.

### Warning And Precautions:-

Use of the nebulizer solution should be subject to close medical supervision during initial dosing.

### Overdose :-

No symptoms specific to overdose have been encountered. In view of the wide therapeutic window and topical administration of ipratropium, no serious anticholinergic symptoms are to be expected.
