Rite Labs

SALRITE RESPULES

SALBUTAMOL RESPIRATOR SOLUTION

Dosage & Administration

SALRITE Respules are for inhalation use only to be inhaled in through the mouth via a suitable nebulizer, as instructed by a physician. The solution should not be injected or swallowed.

Adults (including The Elderly)

2.5mg to 5mg Salbutamol up to four times a day. Up to 40mg per day can be given under strict medical supervision in hospital.

Children 4 years and above

2.5mg to 5mg up to four times a day.

Infants under 18 months Old

Clinical efficacy of Nebulised Salbutamol in infants under 18 months is uncertain. As transient hypoxia may occur supplemental oxygen therapy should be considered.

Warning & Precautions

SALRITE Respules must only be used for inhalation, to be inhaled in through the mouth via a suitable Nebulizer, and must not be injected or swallowed.

Bronchodilator treatment becomes less effective or more inhalations than usual are required.

The patient should be instructed to seek medical advice if short-acting relief Salbutamol should be administered cautiously to patients suffering from thyrotoxicosis.

Overdosage

The expected symptoms of overdosage are hypertension, nervousness, headache, dry mouth, and fatigue.
